Hach Service 3-Point Protection

Establish Performance

Commissioning

After investing in a new instrument, it's important that you get off to a good start with data you can trust and confidence in your ability to properly operate the instrument. Our commissioning service assures that your EZ Series analyzer is calibrated and delivering accurate data, and that you are trained to keep the analyzer running smoothly between service visits.

Calibration/Certification

We know how important instrument calibration and certification is in maintaining regulatory compliance. As part of every service we provide for the EZ Series analyzers, we verify that the instrument is performing to our factory specifications and provide the documentation you need to minimize compliance risk.

Extend Performance

Routine Maintenance

EZ Series analyzers require routine maintenance to assure accuracy and minimize downtime. With a Hach Service Plan, we ease the burden by helping you manage your maintenance schedule and free up your internal resources to focus on other priorities.

Repair

We understand the impact to your process and your operations when your equipment goes down. You need a service partner who has the resources necessary to get you back up and running fast. With repair coverage through a Hach Service Plan, you get priority service from skilled professionals with the knowledge, tools, and parts readily available to restore your EZ Series analyzer to proper operation as quickly as possible.

Elevate Performance

Advanced Maintenance

With ease of use and improved diagnostics comes behind-the-scenes complexity that requires special tools and skills that Hach Service is uniquely qualified to provide. EZ Series advanced maintenance includes the Hach Service Technician's assessment of internal components, like the detector, light source, and sensors, and analysis of calibration data to gain deeper insight into the performance of the instrument in your particular application. This allows Hach Service to detect and prevent potential issues that can impact measurement accuracy, degrade performance over time, or reduce the life of the instrument.
